MiFID II Compliance Automation — CySEC-Ready Audit Reports

THE REGULATORY EXPOSURE

CySEC's position on Article 16(7) is unambiguous: recording calls without active monitoring is a breach. The majority of regulated firms in Cyprus rely on passive recording with no systematic review — leaving them exposed to enforcement action, fines, and reputational risk.

WHAT NOVRACOMP DOES

- **Deterministic rules engine** — regex-mapped directly to MiFID II articles; no hallucination risk on regulatory references.
- **Locally hosted LLM (Mistral-7B)** — contextual analysis layer; on-premise deployment, data never leaves your infrastructure.
- **Violation output** — exact timestamps, article citations, call snippets, case management dashboard.
- **Audit report** — downloadable PDF formatted for CySEC submission.

80–90%

reduction in manual compliance review time

5

business day report delivery

100%

CySEC article reference accuracy

On-Premise

deployment — no third-party data access

PILOT ENGAGEMENT

Scope	500 recorded calls analysed
Output	Full CySEC-ready audit report with violation log, timestamps, article references, and downloadable PDF
Delivery	5 business days from call data receipt
Deployment	On-premise via Docker Compose — no cloud dependency, no data exposure
Investment	€2,500 (one-time engagement)

WHAT TO EXPECT ON TODAY'S CALL

1. Walk through a live audit report output — actual violation flags, timestamps, and article citations.
2. Review the on-premise deployment model and data handling architecture.
3. Discuss your current call monitoring workflow and where the gap exists.
4. No obligation. The output speaks for itself.
